CSFP-1.25G-LH -1513

6COM,CSFP,1.25Gb/s,1550nm,SMF,20KM,DDM,LC connector, 0°C to +70°C

PRODUCT FEATURES

- Compliant with IEEE Std 802.3-2005,1000BASE-BX-U
- Compliant with SFF-8074i and SFF-8472, revision 9.5
- Compliant with SFP MSA Specification
- Digital Diagnostic Monitoring available
- Uncooled 1550nm DFB Laser
- Up to 1.25Gb/s bi-directional data links
- Up to 20km on 9/125µm SMF
- Simplex LC connector compliant
- Single +3.3V DC power supply
- Hot-pluggable CSFP footprint
- Class 1 laser safety certified
- Operating temperature Options (Commercial) 0°C to +70°C
- **RoHS6 Compliant**

APPLICATIONS

- 1000BASE BX IEEE802.3ah
- Point to Point FTTH
- Switched Backplane Applications
- Router/Server Interface
- Switch to Switch Interface
- Other Optical Links

DESCRIPTIONS

CSFP-1.25G-LH -1513 transceivers, according to Compact Small Form Factor Pluggable Multi-Sourcing Agreement (MSA) option 2, The transceiver consists of 2-channel Bi-directional Optical Transceiver unit with five sections: the LD driver, the limiting amplifier, the digital diagnostic monitor, the 1550nm DFB laser and the PIN photo-detector .The module data link up to 20KM in 9/125um single mode fiber.

CSFP-1.25G-LX -1513 transceivers offer a wide range of design options, including Digital Diagnostic Monitoring (DDM) features and three temperature options (commercial, extended or industrial).

Notes:

- 1. When high, output indicates a laser fault of some kind either in Channel A or Channel B. The Host shall read Channel A/B for details: TX Fault from channel A if bit 2 is set in [A2H:110]; TX Fault from channel B if bit 2 is set in [B2H: 110]. Low indicates normal operation. In the low state, the output will be pulled to < 0.8V.
- 2. When high, this output indicates the received optical power is below the worst-case receiver sensitivity (as defined by the standard in use). Low indicates normal operation. In the low state, the output will be pulled to < 0.4V.
- 3. VccT VccR are the power supplies. They are defined as 3.3V ±5% at the SFP connector pin.

深圳市赛克斯康科技有限公司 SHENZHEN 6COM TECHNOLOGY CO.,LTD

OPTICAL NETWORK TRANSCEIVER MANUFACTURER

Maximum supply current is 400Ma@3.3V. Vcc may be internally connected within the SFP transceiver module.

1. Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

| Parameter | Symbol | Minimum | Maximum | Unit |
|---------------------|--------|---------|---------|------------|
| Storage Temperature | TS | -40 | 85 | $^{\circ}$ |
| Relative Humidity | RH | 5 | 95 | % |
| Supply Voltage | VCC | -0.5 | 4 | V |

EEPROM Serial ID Memory Contents

The CSFP MSA defines a 256-byte memory map in E2PROM that is accessible over a 2-wire serial interface at the 8 bit address 1010000X (A0h) or 1011000X(B0h). The digital diagnostic monitoring interface makes use of the 8 bit address 1010001X (A2h) or 1011001X(B2h), so the originally defined serial ID memory map remains unchanged.

Note: The "xx" byte should be filled in according to practical case. For more information, please refer to the related document of SFF-8472 Rev 9.3.

7. Diagnostic Monitor Specifications

The operating and diagnostics information is monitored and reported by a Digital Diagnostics Transceiver Controller (DDTC) inside the transceiver, which is accessed through a 2-wire serial interface. When the serial protocol is activated, the serial clock signal (SCL, Mod Def 1) is generated by the host. The positive edge clocks data into the SFP transceiver into those segments of the E2PROM that are not write-protected. The negative edge clocks data from the SFP transceiver. The serial data signal (SDA, Mod Def 2) is bi-directional for serial data transfer. The host uses SDA in conjunction with SCL to mark the start and end of serial protocol activation. The memories are organized as a series of 8-bit data words that can be addressed individually or sequentially.

| Para | Range | Accuracy | Calibration |
|--------------|--------------|----------|-------------|
| Temperature | 0 to +85°C | ±3°C | Internal |
| Voltage | 2.9 to 3.6V | ±3% | Internal |
| Bias Current | 0 to 80mA | ±10% | Internal |
| TX Power | -10 to -2dBm | ±3dB | Internal |
| RX Power | -21 to -2dBm | ±3dB | Internal |
